Hermes-Cognee Infrastructure Setup

Provision and deploy Hermes Agent, Cognee Backend, and Cloudflare Tunnel on DigitalOcean.

Folder Map

```
hermes-cognee-setup/
├── CLAUDE.md              (you are here)
├── CONTEXT.md             (start here for task routing)
├── setup/                 (onboarding questionnaire)
├── skills/                (bundled Claude skills for domain knowledge)
├── stages/
│   ├── 01-do-provision/  (DigitalOcean droplet setup)
│   ├── 02-hermes-deploy/  (Hermes Agent Docker deployment)
│   ├── 03-cognee-deploy/ (Cognee Backend Docker deployment)
│   └── 04-tunnel-setup/  (Cloudflare Tunnel configuration)
└── shared/                (cross-stage reference files)
```

Triggers

Keyword	Action
`setup`	Run onboarding questionnaire
`status`	Show pipeline completion for all stages

Routing

Task	Go To	Description
Provision infrastructure	`stages/01-do-provision/CONTEXT.md`	Create DigitalOcean droplet

Task	Go To	Description
Deploy Hermes	`stages/02-hermes-deploy/CONTEXT.md`	Deploy Hermes Agent container
Deploy Cognee	`stages/03-cognee-deploy/CONTEXT.md`	Deploy Cognee Backend container
Configure tunnel	`stages/04-tunnel-setup/CONTEXT.md`	Set up Cloudflare Tunnel

What to Load

Task	Load These	Do NOT Load
Provision	Stage 01 CONTEXT.md, shared/vibe-code-rules.md	Other stage contexts
Deploy Hermes	Stage 02 CONTEXT.md, shared/vibe-code-rules.md	Other stages
Deploy Cognee	Stage 03 CONTEXT.md, shared/vibe-code-rules.md	Other stages
Tunnel	Stage 04 CONTEXT.md, shared/vibe-code-rules.md, skills/cloudflare-dns/SKILL.md	Other stages

Stage Handoffs

Each stage writes its output to its own `output/` folder. The next stage reads from there. If you edit an output file, the next stage picks up your edits.
